

Contract Manufacturing Outlook

2024

1st Edition

Conducted by Vault Consulting, LLC

Introduction

The Society of Chemical Manufacturers & Affiliates® (SOCMA) is the trusted source of sector-specific intelligence for business planning and continuity during both ideal and uncertain economic times.

Historically, SOCMA has provided a Specialty Chemical Industry Census that informed companies about the current state of the specialty and fine chemicals sectors.

The Contract Manufacturing Outlook Report brings a more forward-looking perspective, including critical information for budgeting and strategic planning for next year. This report compiles industry data specific to the specialty and fine chemicals and contract and toll manufacturing sectors to provide insight into the buyer/toller relationship.

SOCMA, working with our industry partner, Vault Consulting, LLC, conducted a member and industry network survey to capture:

- High-demand chemistries and technologies
- Immediately available capacities in the industry
- Geographic Location / Market Segment
- Labor & Investment Trends

This Outlook Report lays the foundation to provide a year-over-year comparison of important business strategy data. Data from this survey and SOCMA's Lead Sheet Service will be utilized to provide an all-encompassing view.
